

# Sprint 3 Report

Decentralized Internet

The Distributors

Tuesday, May 22

## **Start doing:**

- Sticking to consistent scheduling of a daily meeting time
- Start emphasizing a user story and how specific solutions adhere to deliver parts or that whole user story
- Present the activities in detail on the shared progress board in Asana to highlight what is being done each day
- Be more proactive in acquiring knowledge about the whole project after completing individual contributions, its important to know how the different functionalities of different components tie in together

## **Stop doing:**

- Planning meetings the day of, plan it in advance and stick to a consistent schedule to avoid conflicts
- Not pushing work to the git repo that is in testing
- Troubleshoot git pull errors when pushing to the same repo

## **Keep doing:**

- Evenly distributing work for separate components of the project
- Asking questions to make sure the progress on certain implementations are what we are prioritizing over other features

## **Tasks Finished:**

- Links between files
- Node peer to peer connectivity with name server for registering nodes, flask server for requests (get, put)
- UI for viewing rendered files
- Designed interface for files on the network
- Polishing the UI

- 

**Tasks Incomplete:**

- Links between files
- Implementing a decentralized identity solution for managing nodes
- I for viewing rendered filesTesting suite

5/8 tasks completed
